

Appendix D: Environmental Policy

This policy and is compatible with the context and strategic direction of Deltor Communications Ltd who are committed to continual improvement of the IMS in order to enhance environmental performance.

We are committed to environmental improvement, pollution prevention, the protection of biodiversity and the ecosystem and the need to mitigate climate change. We acknowledge the need for environmental responsibility and management and will ensure that the environmentally harmful impacts of our operations, processes and products are identified and controlled. Committed to supporting the communities within the area in which we operate, we believe in the practice of social responsibility and look to encourage similar behavior in our employees and suppliers. Deltor fulfil all compliance obligations including the applicable environmental legal and regulatory requirements.

Our environmental processes and procedures are certified to BS EN ISO14001.

As a company committed to continual environmental improvement, we aim to:

- Ensure that adequate processes and procedures are in place to monitor, control and manage the company's environmental responsibilities
- Assess and evaluate environmental aspects and impacts arising from the company's processes and products.
- Maintain an aspects register to enable the company to review the environmental impacts of its operations and provide the framework for setting out quantifiable environmental objectives and targets
- Establish documented objectives for continual environmental improvement based on consideration of our significant environmental aspects, compliance obligations and identified risks and opportunities.
- Implement pollution control, safeguarding and waste management measures.
- Encourage greater reuse and recycling of waste materials.
- Monitor, control and reduce wastage in energy consumption.
- Inform and train to promote staff to work in an environmentally responsible manner
- Promote sustainability and the use sustainable materials and to communicate environmental and sustainability issues to all stakeholders.
- Ensure that decision making in relation to the purchase of plant, equipment and technology includes a review of the environmental impacts involved.
- Ensure that emergency preparedness response plans are in place.
